Upticks Commentary

Below is a technical write-up of eight stocks for this month's UPTICKS publication. Four additions: **GOOGL -0.30%** , **BA +0.46%** , **VLO -0.55%** , and **CVX +1.13%** , and three subtractions: **MTB +0.51%** , **TT +0.20%** , and **CLS -3.68%** .

(All prices reflect closing prices as of Thursday 8/13/26.)

ADDITIONS: **GOOGL -0.30%** , **BA +0.46%** , **VLO -0.55%** , **CVX +1.13%**

Alphabet (GOOGL -0.30% -346.36)– Pullback from May creates attractive risk/reward

Support- \$335, 315; Resistance- \$384, 408

Source: Trading View

GOOGL -0.30% has consistently been one of the top Hyperscalers in terms of technical strength and its weakness since May creates an attractive risk/reward to buy dips for a push back to new highs.

Despite the sharp drawdown from May into July, no intermediate-term damage occurred on weekly charts as the stock successfully held the area of important trendline support from 2025 lows.

While pushing back to new all-time highs likely could take time,

GOOGL -0.30% appears like an attractive risk/reward following its consolidation from May and this past week's progress is an initial step towards a coming push back to all-time highs.

An ideal area of support arrives near 335 with a possible maximum decline to near 315, while movement back over \$384 should lead up initially to \$408 and eventually to \$450.

Overall, the risk/reward looks appealing to buy dips in **GOOGL -0.30%**

Boeing (BA +0.46% - \$230.33) Giant six-year consolidation looks ready to be exceeded

Support- \$222, 205; Resistance- \$241, 267

Source: Trading View

BA +0.46% recent strength since March of this year looks to be making significant strides towards lifting **BA +0.46%** back to the resistance highs of its six-year consolidation base.

The stock's movement just this past week has lifted it to the highest levels since May and I expect a coming push to exceed the six-year area of resistance near \$267.

When **BA +0.46%** exceeds 2026's early highs at \$254.35 on the breakout of \$241, this should help the stock start to accelerate up and climb back to new all-time highs at \$435.56.

Initial upside targets above \$241 should lie near \$267 and above this would kick off a much larger bullish rally back to test all-time highs

Thus, while the breakout is currently premature, **BA +0.46%** looks like an attractive risk/reward and provides a welcome relief for those seeking alternatives to the volatile technology sector which look to be starting to show technical improvement. Support lies near \$222, followed by \$205. This latter area provides a clear "line in the sand" which cannot be breached without postponing the rally.

Valero Corp. (VLO -0.55% - \$342.92) Parabolic move likely could continue given Refining acceleration

Support- \$291, 269; Resistance- \$385, 424

Source: Trading View

VLO -0.55% is one of the best Refining names in the entire Energy sector and recent acceleration bodes well for a continued lift higher into October before some consolidation.

While this stock has gotten understandably stretched, the fundamentals surrounding the surge in the Refining names given Crack spreads being elevated on the Strait of Hormuz not being fully operational have served to boost this sub-sector of Energy.

My expectation is for WTI Crude to lift up to \$100-\$110 into this Fall before an eventual collapse back down to \$50 into year-end.

If this were to happen, Energy names like **VLO -0.55%** likely could benefit further between August and October and my expectation is that it's best to have exposure to Refining for investors who wish to play the Energy sector on continued Middle East unrest.

Gains to \$385 look likely with a possible move to \$424 before this starts to stall out. Meanwhile any near-term dips down to initial support at \$291 should provide an excellent risk/reward

Chevron Corp (cvx +1.13% - \$197.70) Push back to new highs appears underway

Support- \$165, 151; Resistance- \$248, 303

Source: Trading View

CVX +1.13% has also begun a sharp recovery following the advance above its multi-year resistance which marked the consolidation between 2020 and early 2026.

While not as overbought as **VLO -0.55%**, this looks to be a solid entry following the pullback from early this year which has now begun to turn back higher.

Weekly MACD is turning back to positive and this week could possibly achieve a new four-week high which would help this push up to test and exceed early 2026 peaks.

I expect a technical advance to reach \$248 once 2026 peaks are exceeded, and expect this should be possible if WTI Crude oil pushes higher up to \$100 into this Fall.

This also looks to be a prudent choice heading into the notoriously volatile Fall period in Q3 in a Mid-term election year as Energy could outperform between now and October if Crude holds up and might offer better relative performance than other sectors in the market. Upon Crude getting above 100 into late September/October, it might be worth keeping a close eye on CVX for evidence of this starting to reach resistance.

Deletions: MTB +0.51% , TT +0.20% , CLS -3.68%

M&T Bank – (MTB +0.51% - \$253.25) Stretched nature of this bank stock warrants removing given weekly, monthly DeMark exhaustion signals

While there isn't much to complain about given MTB +0.51% 's structure and move in recent months, it looks to be nearing an area where further gains might prove difficult without consolidation.

Monthly RSI has now exceeded 70 and has begun to show negative divergence compared to the prior runup in 2024 which produced a higher RSI reading.

Weekly and monthly DeMark-based exhaustion signals are now present, but not confirmed, but this confluence following the big runup is a reason to consider removing this from Upticks.

While the daily pattern remains constructive, I am choosing to remove **MTB +0.51%** at this time, but might consider in the future upon proper consolidation of this recent runup.

Trane Technologies (**TT +0.20%** **-\$477.69**) – Bounce following heavy volume breakdown merits removing **TT +0.20%**

Technical structure has started to worsen in **TT +0.20%** in recent months which merits removing this stock from Upticks.

As shown above, the breakdown of the stock to undercut this year's support on heavy volume has caused the technical structure to begin

to deteriorate as momentum has grown weaker on a monthly basis (not shown).

While the rebound since July has been constructive for daily momentum, it has not served to improve the technical structure and **TT +0.20%** remains below the minor downtrend from its 2026 peak.

I'm not as fond of **TT +0.20%** given the start of more intermediate-term momentum deterioration, and the high volume selling likely could prevent this from making much upside progress between now and the Mid-term Election.

Celestica (CLS -3.68% - \$347.63) – Recent consolidation looks troubling and might lead to a selloff to test March lows into this Fall

Technically speaking, the rally from the July lows hasn't proven to be too inspiring given the degree of the weakness from this past Spring.

The choppy nature of its rebound attempts in the last month have produced a sporadic pattern that many investors might describe as a counter-trend bounce after the early year weakness.

There's enough inconsistencies with this chart pattern to warrant revisiting this at a later time, and for now, any break of \$305 wouldn't have much support until March lows just above \$240. Movement back above \$375 is necessary to help restore this stock's technical strength and at present, this doesn't appear likely right away heading into a difficult seasonal period.

Commentary Previously Removed UPTICK holding

Gilead Sciences (GILD -0.06% - \$138.14) – Weakness during a time of sector strength isn't comforting

GILD -0.06% 's recovery of its broken trend was marginally positive in recent months, but unfortunately, this stock has failed to regain much ground following the 20%+ decline over the four-month period between February and June.

While I do expect that **GILD -0.06%** might be able to climb back to \$144-\$145, I'm uncertain that this has the strength to regain this year's highs.

Despite its rally attempt in recent months, **GILD -0.06%** has not been able to recoup its former trend that had been broken on a very good period of outperformance by Healthcare in recent months.

Moreover, Biotechnology has shown very good strength, but stocks like **AMGN -0.81%** look like better stocks to favor vs. stocks like **GILD -0.06%** which are struggling to regain their former momentum.
